MESSAGE

While Agriculture remains critically important to the Indian economy, horticulture plays a crucial role in the country's agricultural landscape, contributing significantly to the national economy and providing livelihood opportunities to millions - by diversifying Indian agriculture, offering higher returns per unit area compared to traditional farming, supplementing farmers' incomes and enhancing farm profitability.

Several initiatives have been taken by the Government for the holistic development of the Horticulture Sector. The 'Mission for Integrated Development of Horticulture (MIDH)' has been implemented in the year 2014 in the country by adopting an end-to-end holistic approach to assure appropriate returns to growers/producers by covering pre-production, production, post-harvest management, processing and marketing. The production of horticulture crops has increased from 268.85 Million MT in 2012-13 to 354.74 Million MT in 2023-24 and has overtaken the production of food grains in the country. Globally, India is the second largest producer of fruits and vegetables. Country ranks first in the production of a number of crops like Limes and Lemons, Mangoes, Guavas & Mangosteens, Papaya, Banana, Onions and Shallots (dry excluding dehydrated) and Okra.

Recognizing the importance of timely and reliable information on different aspects of agriculture, the Ministry of Agriculture & Farmers Welfare thrives to bring out publications, wherein all aspects of data crucial for decision making are compiled. The 'Horticultural Statistics at a Glance-2024' is one such important publication of the Ministry. The publication provides a comprehensive picture of the horticulture sector of the country by providing time-series data on important parameters such as area, production, value of output, storage & processing infrastructure developed, market arrivals, prices, imports, exports, technical information on major horticulture crops and so on.

I compliment Shri Arun Kumar, Senior Economic & Statistical Adviser; Shri Anindya Banerjee, Adviser (Horticulture Statistics), Smt. Swapnalee Bhattacharya, former Adviser (Horticulture Statistics) along with the entire team of the Horticulture Statistics Unit (HSU): Smt. Suchitra Yadav, Director; Shri Hemanga Bhargav, Assistant Director; Smt. Somya Srivastava, Junior Statistical Officer; Shri Mohammad Mustkeem, Consultant and Shri Ranbir Singh, Data Entry Operator for their unrelenting efforts in bringing out this publication. I am confident that this publication will be appreciated by the policy makers, farmers, academicians, researchers and other stakeholders.

FOREWORD

The horticulture sector in India encompassing a wide range of crops including, fruits, vegetables, spices, plantation crops, flowers, aromatic & medicinal plants, plays a crucial role in the country's economy, food security, nutrition and employment. Horticulture crops account for nearly thirty-seven percent in value of total agriculture crops of the country. Data-driven practices contribute to sustainability of horticulture crops, manage resources effectively, while creating a competitive advantage for trade through innovation and efficiency. As such, data is crucial in horticulture for enabling growers on planting, irrigation and fertilization to optimize resource use, improve yield and enhance crop quality.

The publication 'Horticultural Statistics at a Glance-2024' incorporates updated information on all-important indicators of the horticulture sector. The present edition of the publication is Eighth in the series. The publication is widely used as a reference book for data on various horticulture crops produced in the country. The book presents statistics on State-wise area, production and productivity of horticulture crops. It also provides information on value of output, market arrivals, prices and trade of various horticulture crops.

I express my deep gratitude to the Secretary, DA&FW, for his unwavering support and guidance. I congratulate Shri Anindya Banerjee, Adviser (Horticulture Statistics) and Smt. Swapnalee Bhattacharya, former Adviser (Horticulture Statistics) along with the Officers/Officials associated with the Horticulture Statistics Unit (HSU): Smt. Suchitra Yadav, Director; Shri Hemanga Bhargav, Assistant Director; Smt. Somya Srivastava, Junior Statistical Officer; Shri Mohammad Mustkeem, Consultant and Shri Ranbir Singh, Data Entry Operator, for their enthusiasm, hard work and dedication that have helped in bringing out this publication. I am hopeful that like the previous edition, the current publication will also be appreciated by all stakeholders for its comprehensive coverage of various aspects of the horticulture sector.

PREFACE

The horticulture sector has emerged as a key pillar of India's economy, driving food security, nutrition and employment. Its growth and significance continue to mirror trends from previous years. As production surges, the need for comprehensive data on horticulture and related factors has become essential. Recognizing the importance of timely and reliable information on different aspects of horticulture, the Government has taken various initiatives to improve the database of horticulture crops. The 'Horticultural Statistics at a Glance' has been the result of such an effort of the Ministry.

The 8th issue of the 'Horticultural Statistics at a Glance-2024' being brought out, contains rich collection of various information pertaining to horticulture crops including area, production, productivity, value of output, export, import, market arrivals, prices, etc. It also gives physical and financial achievement under the 'Mission for Integrated Development of Horticulture (MIDH)' commodity profiles of important horticulture crops, infrastructure availability, rainfall distribution, irrigated area, etc. For this publication, data on area and production of Horticulture crops has been taken from State/UTs and other Central source agencies.

I take this opportunity to thank Shri Devesh Chaturvedi, Secretary and Shri Arun Kumar, Senior Economic & Statistical Adviser, for their valuable support and guidance. I like to compliment the efforts of Smt. Swapnalee Bhattacharya, former Adviser (Horticulture Statistics) and the team of the Horticulture Statistics Unit (HSU): Smt. Suchitra Yadav, Director; Shri Hemanga Bhargav, Assistant Director; Smt. Somya Srivastava, Junior Statistical Officer; Shri Mohammad Mustkeem, Consultant and Shri Ranbir Singh, Data Entry Operator, for their unrelenting efforts to bring out this publication.

Overview of Horticulture Sector

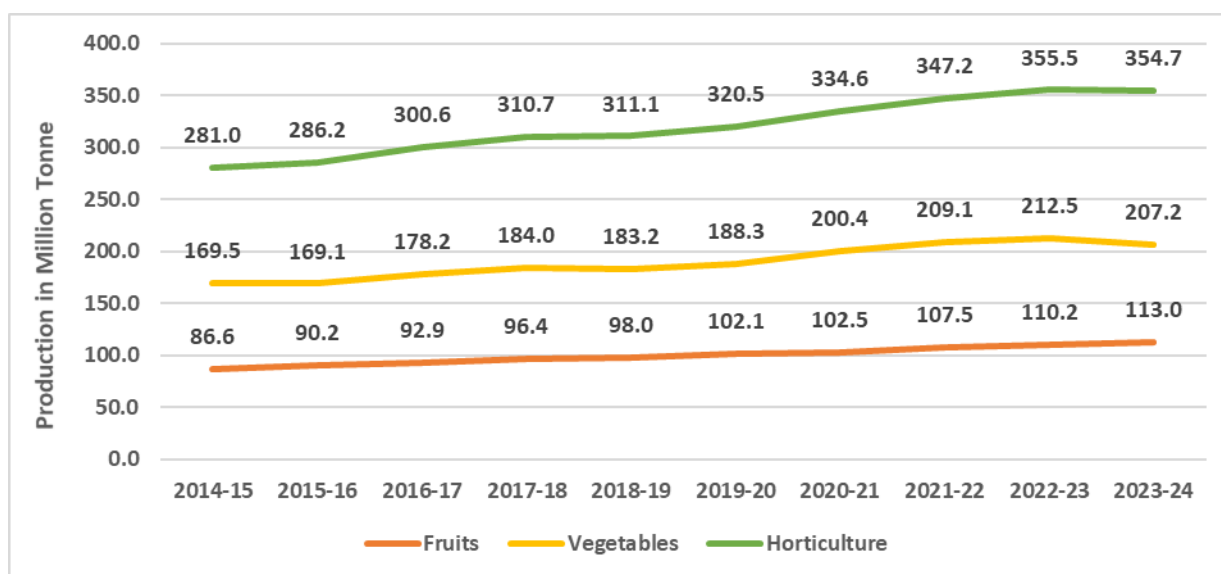

The need for diversification to horticulture sector was acknowledged by the Government of India in mid-eighties by focusing its attention on investment in this sector. Presently horticulture has established its credibility in improving income through increased productivity, generating employment and in enhancing exports. Resultantly, horticulture in the country has moved from rural confines to commercial ventures.

The Department of Agriculture & Farmers Welfare (DA&FW) of the Ministry of Agriculture & Farmers Welfare is the nodal Department for over viewing horticulture development in the country. It implements different programmes through Departments of Horticulture/Agriculture in all the States and provides the leadership to coordinate activities for the promotion of horticulture. However, efficient implementation of programme and policies call for robust information in time. In this backdrop, this book presents the overall information on horticulture, focusing on area, production and yield estimates along with information about price, market arrivals and export.

The scenario of horticulture crops in India has become very encouraging. The percentage share of horticulture output in Agriculture has become 38%. Share of Plan outlay of Horticulture under agriculture & allied cultivation was Rs. 3844 '00 crore in the year 2011-12, has increased to Rs. 6051 '00 crore in 2023-24 (Table-4.1).

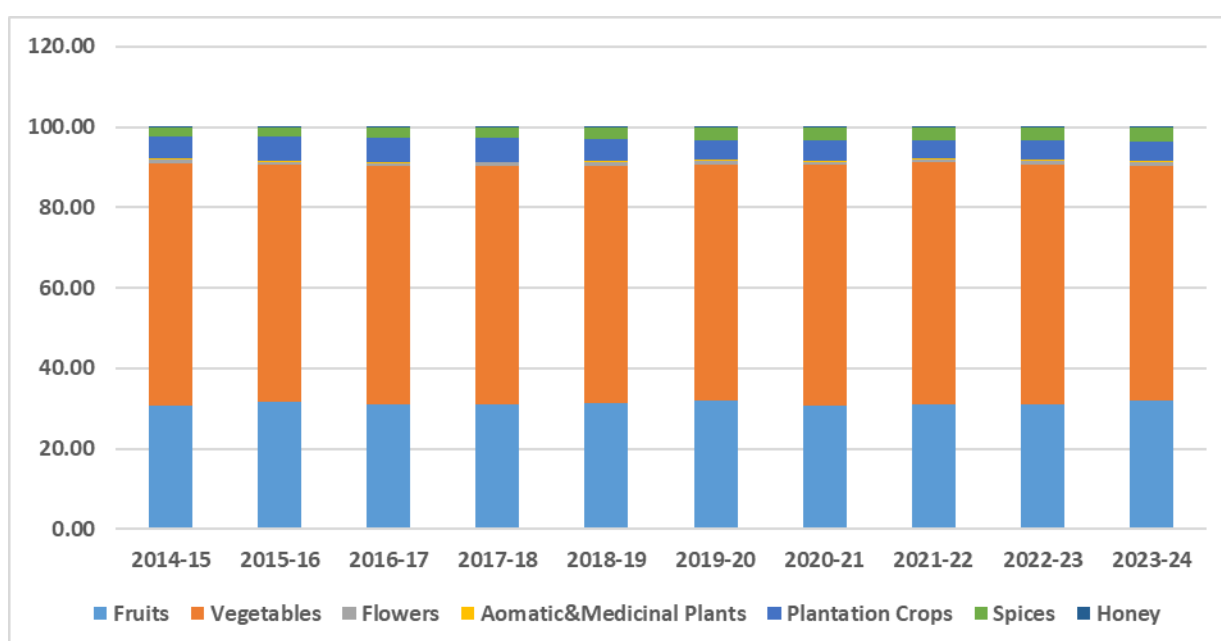

PRODUCTION: India has witnessed increase in horticulture production over the last few years. Significant progress has been made in area expansion of different horticulture crops resulting in higher production. Over the last decade, the area under horticulture grew by 1.87% per annum and annual production increased by 2.50%. During 2023-24, the production of horticulture crops was 354.74 Million Tonne from an area of 29.09 Million Hectare (Table 1.1). The production of vegetables has increased from 169.48 Million Tonne to 207.21 Million Tonne since 2014-15 to 2023-24 and production of fruits has increased from 86.60 Million Tonne to 112.98 Million Tonne since 2014-15 to 2023-24 as depicted in Table-1.1.

Figure-1.1: Annual Production of Fruits, Vegetables and Total Horticulture crops over the last 10 years from 2014-15 to 2023-24

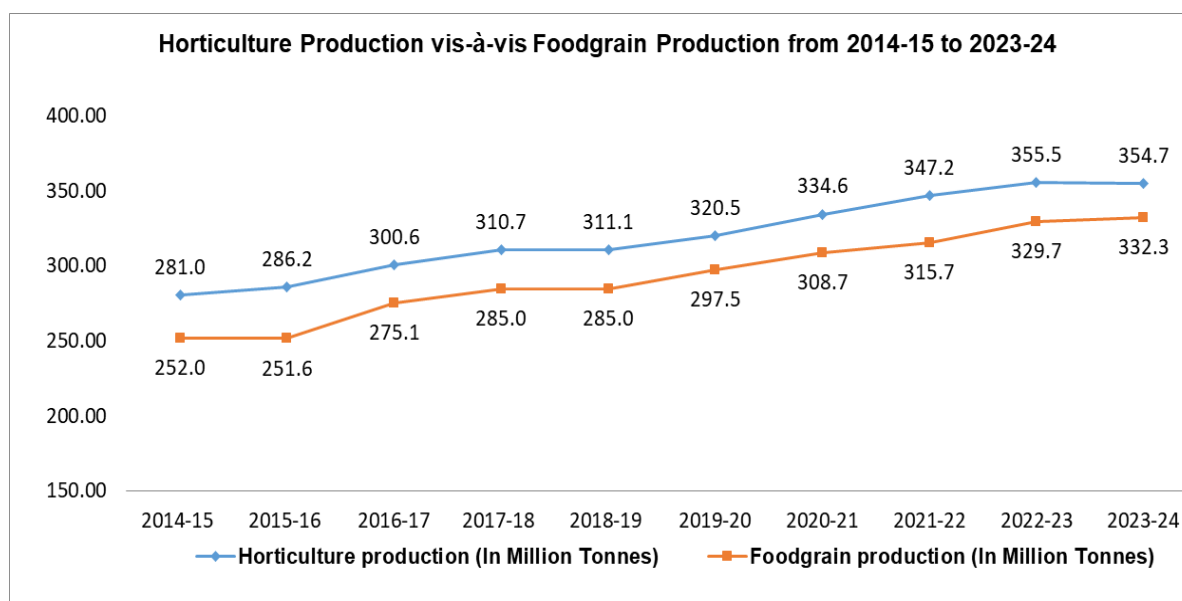

The percentage distribution of total horticulture crops in the country remains highest for vegetables (58 - 60%) followed by fruits (31 - 32%) and Plantation crops (5 - 6 %) over the last ten years as shown in Table-1.4.

Figure-1.2: Percentage distribution of total horticulture production by major crop categories from the year 2014-15 to 2023-24

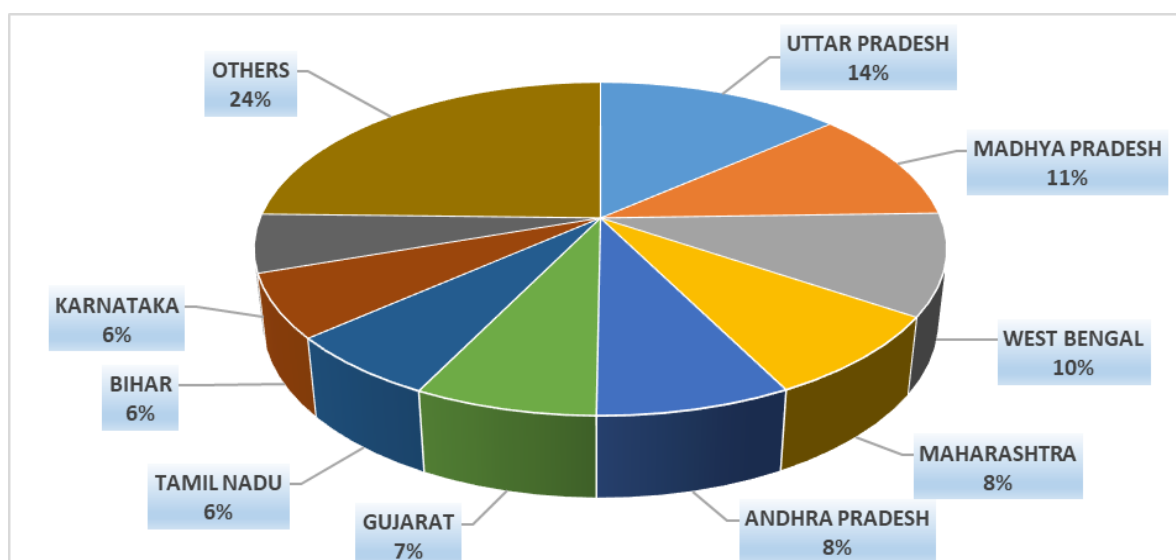

The production of Horticulture crops have outpaced the production of food grain since 2012-13 (Table 1.5). During 2014-15 to 2023-24, horticulture production and food grain production may be seen at Figure 1.3.

Figure - 1.3: Horticulture Production vis-à-vis Food grain Production from 2014-15 & 2023-24

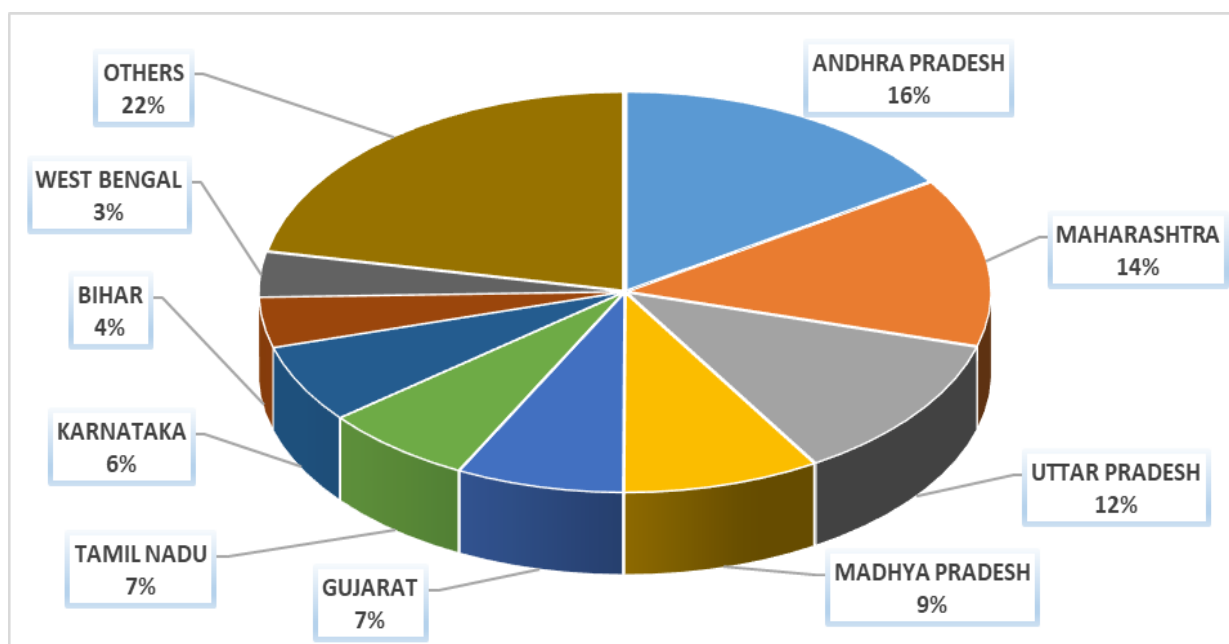

Compound Annual Growth Rate (CAGR) in Horticulture production in India during 2014-15 to 2023-24 is 2.36%. Area under Horticulture crops is increasing in India since 1991-92. Compound Annual Growth Rate (CAGR) in Horticulture area during 2014-15 & 2023-24 is 2.19%. In 2023-24, the total horticulture production was the highest in the State of Uttar Pradesh (484.17 Lakh Tonne) followed by Madhya Pradesh (385.74 Lakh Tonne) and West Bengal (348.47 Lakh Tonne) (Table-7.2.1)

Figure 1.4: Percentage share of total horticulture production among major producing States for the year 2023-24

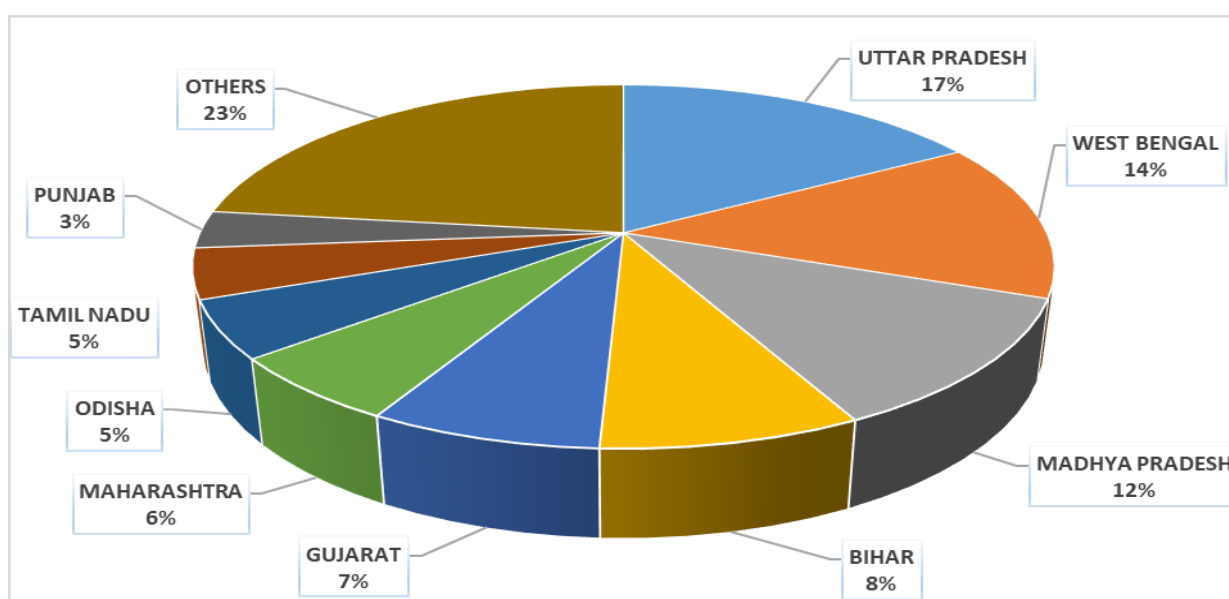

The total production of fruits in the year 2023-24 was the highest in case of Andhra Pradesh (177.81 Lakh Tonne) followed by Maharashtra (154.54 Lakh Tonne) and Uttar Pradesh (134.60 Lakh Tonne) (Table-7.2.2).

Figure-1.5: Percentage Share of Fruits production in major fruits producing States for the year 2023-24

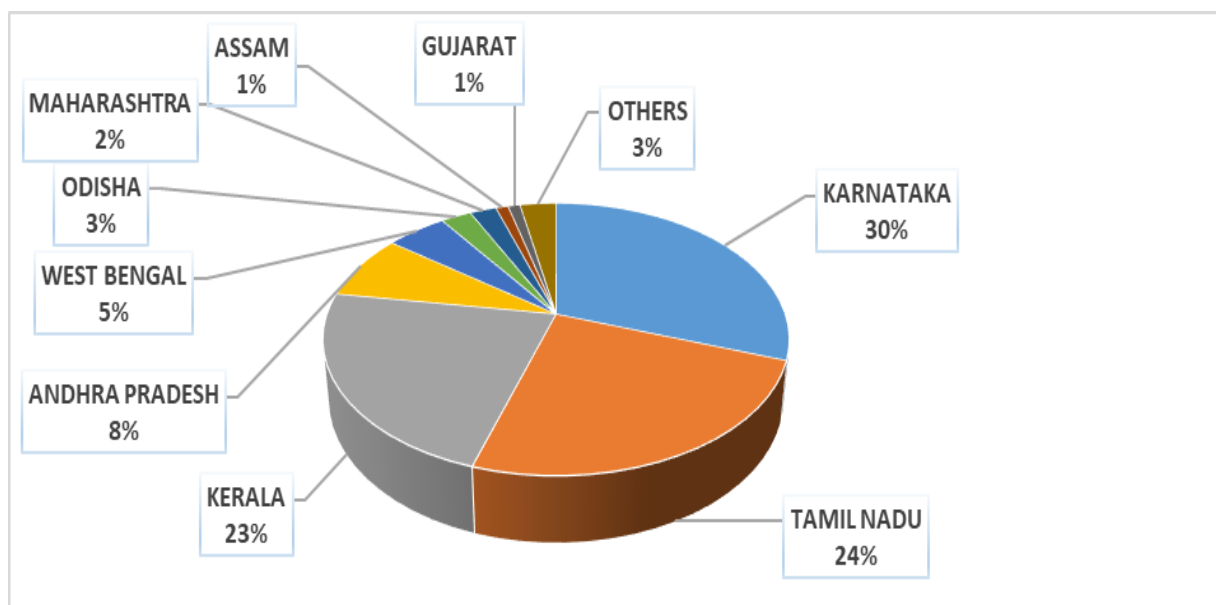

Apart from the nutritional benefits, the production of vegetables improves the economy of a country as these are very good source of income and employment. During 2023-24, the area under vegetable crop was 112.32 Lakh Hectare with a production of 2072.08 Lakh Tonne in India (Table 1.1). For this period the total vegetables production was the highest in case of Uttar Pradesh (344.30 Lakh Tonne) followed by West Bengal (292.01 Lakh Tonne) and Madhya Pradesh (243.50 Lakh Tonne) (Table-7.2.3).

Figure-1.6: Percentage share of Vegetables production in major vegetables producing States for the year 2023-24

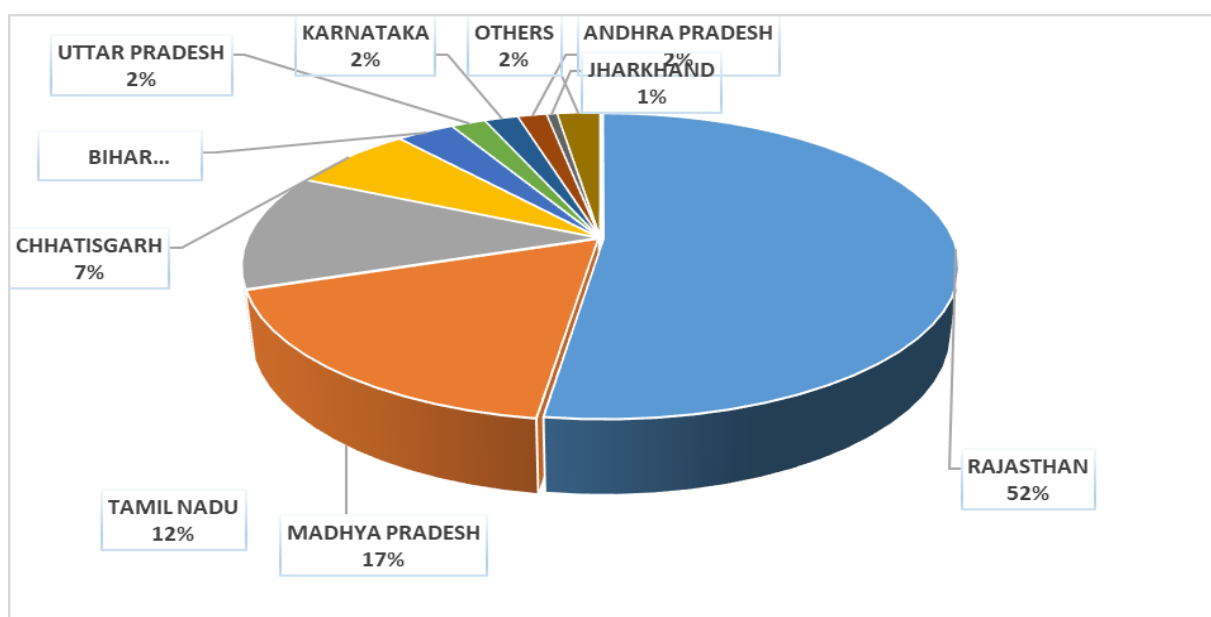

During 2023-24, the area under Plantation crop was 44.56 Lakh Hectare with a production of 176.66 Lakh Tonne in India (Table 1.1). For this period the total production was the highest in case of Karnataka (53.68 Lakh Tonne) followed by Tamil Nadu (43.26 Lakh Tonne) and Kerala (39.99 Lakh Tonne) (Table-7.2.4).

Figure-1.7: Percentage share of Plantation production in major plantation producing States for the year 2023-24

During 2023-24, the area under Aromatic and Medicinal crops was 9.26 Lakh Hectare with a production of 7.26 Lakh Tonne in India (Table 1.1). For this period the total production was the highest in case of Rajasthan (3.80 Lakh Tonne) followed by Madhya Pradesh (1.27 Lakh Tonne) (Table-7.2.5).

Figure-1.8: Percentage share of Aromatic and Medicinal production in major Aromatic and Medicinal producing States for the year 2023-24

Floriculture has good potential in the country, catering to both the domestic and international demand. Floriculture is also important for bee-keeping industry, which too provides an alternate source of income to the Indian farmers. During 2023-24, the highest production of Flowers was recorded in Tamil Nadu (6.85 Lakh Tonne) followed by Madhya Pradesh (5.06 Lakh Tonne) and Karnataka (4.16 Lakh Tonne) (Table-7.2.6).

INFRASTRUCTURE AVAILABILITY: In India, because of imperfect coordination between supplies and demand, seasonality and perishable nature of horticulture crops, storage plays an important role in the marketing. A chain of cold storages are set up in different States of our country, the State of Uttar Pradesh (2493) was having the highest number of cold storages as on 31.03.2024 followed by Gujarat (1032) and Punjab (769) (Table-11.5).

CONSUMPTION: During 2023-24, the average daily per capita per consumer unit intake of calories, proteins and fats is higher among urban population than that of rural population. Along with urbanisation, people are likely to increase their calorie intake at a higher pace. It is estimated that per capita net fruits availability in our country is 154.68 gm per day and vegetables availability in our country is 283.70 gm per day. The annual consumption of Onion is 17.79 Million Tonne, Potato is 29.01 Million Tonne and Tomato is 13.39 Million Tonne, whereas the demand for Onion is 24.94 Million Tonne, Potato is 45.91 Million Tonne and Tomato is 20.68 Million Tonne (Table 12.1 -12.3).

WORLD SCENARIO: India stands as the world's second-largest producer of fruits and vegetables, highlighting its pivotal influence in global markets (Table 13.1). The country remains a leading exporter of key commodities, including Ginger, Banana, Potato, and various Chillies and Peppers, dry (Capsicum spp., Pimenta spp.), raw.

The development achieved in the horticulture sector is indicative of the fact that there is growing demand for horticulture produce. The experiences have been rewarding for enhanced output from the investment. Availability of timely robust information in this sector will certainly improve the socio-economic conditions of Indian farmers by providing self-reliance besides environmental protection.

Notes:

1: Prior to 1993-94 data of flowers was not collected.

2: The production figures of flowers till 2011-12 included only loose flowers as the production of cut flowers were collected in numbers. From 2012-13 onwards, the figures for cut flowers (converted into Metric Tonne from numbers) were also included in the production figures of flowers.

3: Till 2003-04, Separate estimates for aromatic and medicinal plants were not released.

4: Production figures of Honey was not available for the year 1991-92, 1992-93, 1994-95, 2011-12 and 2012-13.

5: Prior to 2015-16, watermelon and muskmelon were included under vegetables. From 2015-16 onwards there are classified as fruits.

Notes:		
1: Prior to 1993-94 data of Flowers was not collected.		
2: The production figures of flowers till 2011-12 included only loose Flowers as the production of cut flowers were collected in numbers. From 2012-13 onwards, the figures for cut Flowers (converted into Metric Tonne from numbers) were also included in the production figures of Flowers.		
3: Till 2003-04, separate estimates for Aromatic and Medicinal Plants were not released.		
4: Production figures of Honey was not available for the year 1991-92, 1992-93, 1994-95, 2011-12 and 2012-13.		
5: Prior to 2015-16, Watermelon and Muskmelon were included under Vegetables. From 2015-16 onwards, there are classified as Fruits.		

Methodology for Estimation of Horticulture Crops

Fruits and vegetables account for nearly 90% of total horticulture production in the country. India is now the second largest producer of fruits and vegetables in the world and is the leader in several horticultural crops, namely 'Mango, Guava and Mangosteen', Banana, Papaya, Ginger (raw), Arecanut, Okra and 'Pumpkin, Squash and Gourd'. However, the nature of horticulture crops being such that it is not easy to make assessment of their production. These crops, especially vegetables are grown in small plots, fields or in the back of the houses, do not have single harvesting in most of the cases which makes their assessment difficult. Many horticulture crops have multiple pickings in a single season. Similarly, many fruit trees are scattered, which are not counted for assessment.

In view of above difficulties several research studies were taken up by agricultural scientists in the past. Then Central Sector Plan Scheme called Crop Estimation Survey of Fruits & Vegetables (CES-F&V) - a component of Improvement of Agricultural Statistics Scheme, was implemented by the then Directorate of Economics and Statistics (DES), Ministry of Agriculture, Govt. of India. The scheme envisaged the generation of area and production estimates using sampling and estimation methodology evolved by Indian Agricultural Statistics Research Institute (IASRI), New Delhi. The scheme was implemented in 11 States (Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Karnataka, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh) covering selected crops - 7 fruit crops (Apple, Mango, Citrus, Pineapple, Grapes, Banana and Guava) and 7 vegetable crops (Potato, Cabbage, Cauliflower, Onion, Tomato, Ginger and Turmeric). The scheme was initiated in 1982-83 and was implemented by central funding through the then Department of Agriculture and Cooperation (DAC). However, the scheme was fraught with some problems which was noted by National Statistical Commission (NSC), MoSPI which recommended that:

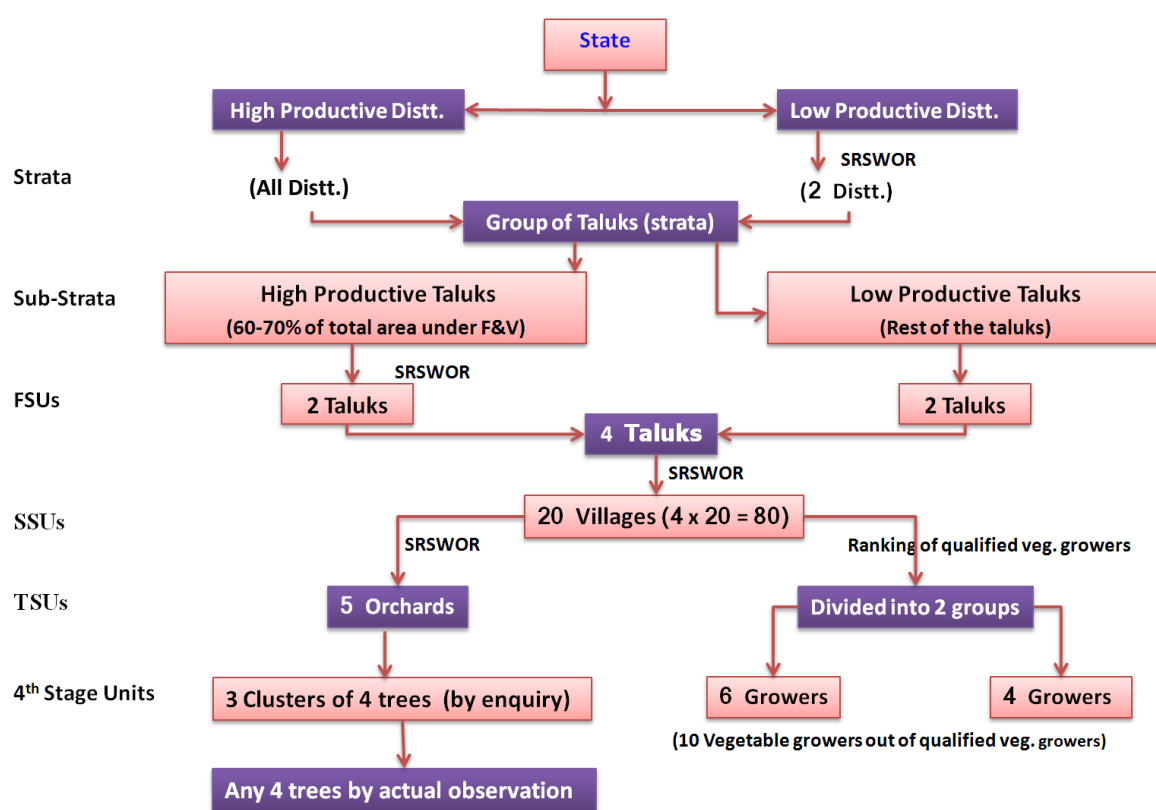

- The methodology adopted in the pilot scheme of "*Crop Estimation Survey on Fruits and Vegetables*" should be reviewed and an alternative methodology for estimating the production of horticultural crops should be developed taking into account information flowing from all sources including market arrivals, exports and growers associations.
- Special studies required to establish the feasibility of such a methodology should be taken up by a team comprising representatives from IASRI, Directorate of Economics and Statistics, Ministry of Agriculture (DESMoA), Field Operations Division of National Sample Survey Organization (NSSO (FOD)) and from one or two major States growing horticultural crops.
- The alternative methodology should be tried out on a pilot basis before actually implementing it on a large scale.

In view of NSC recommendation a project entitled "Pilot study to develop an alternative methodology for estimation of area and production of horticultural crops" funded by Central Statistics Office (CSO), Ministry of Statistics and Programme Implementation, Govt. of India was undertaken by ICAR-IASRI and developed an alternative methodology which was field-tested in two States namely, Maharashtra and Himachal Pradesh (H.P.) covering major fruits and vegetables in major fruit and vegetable growing districts. One important recommendation of this study was to validate and test the developed alternative methodology in few more States before its implementation at large scale. Meanwhile, the earlier scheme viz. CES-F&V was discontinued by the DES from the year 2013-14.

In view of the recommendation under the study funded by CSO, MoSPI and discontinuation of the earlier scheme (CES-F&V), a project entitled 'Study to test the developed alternative methodology for

estimation of area and production of horticultural crops': IASRI Component of CHAMAN Programme under MIDH" was approved in 2014 by the then Department of Agriculture, Cooperation and Farmers Welfare (DAC&FW), Ministry of Agriculture, Govt. of India as IASRI component of the Coordinated Programme on Horticulture Assessment and Management using geoinformatics (CHAMAN) project under Mission for Integrated Development of Horticulture (MIDH). The study was carried out in six States namely, Maharashtra, Andhra Pradesh, Tamil Nadu, Himachal Pradesh, Haryana and Madhya Pradesh. Based on the outcome of the project, the methodology has been revised and revised methodology was accepted in 2018 by the Ministry of Agriculture, Govt. of India, which is as follows:

The sampling design adopted for the survey is stratified multistage random sampling. First of all, important districts were identified for conducting survey on the basis of district-wise area figures under fruits and vegetables of the State. The identified districts i.e. high productive districts covering about 70-80% of the total area under fruits and vegetables in the entire state are treated as stratum one and rest of the districts i.e. low productive districts formed another stratum. From stratum one, all districts are selected and two districts from stratum two are selected by simple random sampling without replacement (SRSWOR).

Periodicity = Fortnightly

Fig: Revised sampling design for the Fruits and Vegetables Survey

Taluk/tehsil-wise area figures under fruits and vegetables were used for sub-stratifying the taluks/tehsils of the high productive districts into two groups viz. high productive taluks/ tehsils and low productive taluks/tehsils. High productive taluks/tehsils are those which constitute 60-70% of the total area under fruits and vegetables of the district and rest of the taluks/tehsils fall under low productive taluks/tehsils. A sample of two taluks/tehsils was selected by SRSWOR from both the groups after rejecting taluks/tehsils contributing less than 5% of total area under fruits and vegetables of the district. From

each of the four selected taluks/tehsils, a sample of 20 villages was selected by SRSWOR. The selected villages were completely enumerated so as to record number of orchards under different fruits and cropping pattern with respect to vegetables. An orchard for selection process should have minimum of 12 fruit trees of bearing age of a single fruit crop.

For fruits survey, a sample of five orchards was selected from each selected village by SRSWOR. In case there were more than one fruit crop available in the village then orchards of two major fruits were selected in proportion to the number of orchards for two major fruit crops in each of the village with a minimum of two orchards for each fruit crop. Major fruit crops were decided on the basis of number of orchards of different fruits available in the village. From each selected orchard, a sample of three clusters each consisting of four trees of bearing age were selected randomly out of the total number of trees of bearing age. The yield of selected trees was collected through enquiry and yield of any four trees were collected through physical observation.

For vegetable survey, a sample of 10 vegetable growers were selected out of qualified growers. Qualified growers were considered who have 0.1 Ha and above gross cropped area under vegetables in case of Plain State and 0.01 Ha and above in case of Hilly State.

Data collection work was done by the nominated staff of State Government/ hired Field Investigators through service providers by the respective State Govts. Schedules along with instruction manual were prepared in English and Hindi language for data collection and training for data collection was imparted to master trainers as well as field investigators by the Scientists and Chief Field Officer of ICAR-IASRI. Supervision of data collection in all the selected districts in all the six States was carried out by the ICAR-IASRI Scientists, Chief Field Officer and Technical officers.

The data entry software was developed for digitization of primary data and provided to the States for data entry. Estimation procedures to obtain district level estimates of total production, yield rates and area under important fruits as well as vegetables and number of trees of important fruits were developed as per the proposed sampling design. The entered data received was scrutinized. Data analysis was done using the data analysis software developed for the purpose and estimates of area, production and yield for fruits and vegetables for the surveyed districts of all the six States under study were obtained. Estimation of area and production for fruits and vegetables for the non-surveyed districts of all the six States was done using different models viz. Regression models, ARIMA, ARIMAX and weather-based models namely LASSO and PCR. Last 15 years area and production figures along with market arrival data were used for modelling purpose.

Coordinated Programme on Horticulture Assessment and Management using geo-informatics (CHAMAN)

The Department of Agriculture, Cooperation & Farmers' Welfare, Ministry of Agriculture & Farmers Welfare under the Mission for Integrated Development of Horticulture (MIDH) had launched a project called CHAMAN in September, 2014. The programme had the objective to develop and firm up scientific methodology for estimation of area and production under horticulture crops. It had two main components namely: (1) Sample Survey (SS) methodology and (2) Remote sensing (RS) Technology for estimation of area and production of horticultural crops. The former is already explained in above sub-section. The latter is described below:

The Remote Sensing programme was implemented by Mahalanobis National Crop Forecast Centre (MNCFC) and had the following components:

- i. **Area and Production assessment of seven major horticultural crops in major States.**
- ii. Remote sensing for **developmental studies** like Site suitability and post-harvest infrastructure development.
- iii. **Detailed scientific field level research studies** for developing technology for crop identification, yield modeling and disease assessment for other horticulture crops.

Area Assessment

Area assessment was carried out for selected crops in the selected districts of major States. The crops were selected based on the production share. Accordingly, following crops and study area were proposed. Satellite data used were either of LISS III (23.5 m resolution) or LISS IV, depending upon the spatial extent of the crop. In absence of availability of Indian satellite data during the crop growth, foreign satellite data was also explored.

Crop Type	Crop	State (Districts)
Fruits	Banana	Tamil Nadu, Andhra Pradesh, Maharashtra, Gujarat, Karnataka
	Mango	Uttar Pradesh, Gujarat, Karnataka, Andhra Pradesh, Bihar
	Citrus	Andhra Pradesh, Maharashtra, Punjab, Madhya Pradesh, Gujarat
Vegetables	Potato	Uttar Pradesh, Bihar, West Bengal, Gujarat, Punjab
	Onion	Maharashtra, Gujarat, Madhya Pradesh, Karnataka, Bihar
	Tomato	Andhra Pradesh, Odisha, Karnataka, Madhya Pradesh, West Bengal, Bihar
Spices	Chilli	Andhra Pradesh, Karnataka, West Bengal, Madhya Pradesh, Odisha

Production Assessment

For production forecasting, yield modeling was carried out. Indian Meteorological Department, under FASAL project, develops district-level, empirical agro-meteorological yield models for different crops. Similar procedures were followed for yield forecasting of vegetable crops.

Horticultural Development Studies

The Horticultural development studies were grouped into following categories:

- i) Site Suitability
- ii) Post-Harvest Infrastructure
- iii) Crop Intensification
- iv) GIS database creation
- v) Orchard Rejuvenation
- vi) Aqua-horticulture

These studies were used for:

- i) Site-suitability: for introduction/expansion of important horticulture crops, e.g. scope of replicating the village level horticulture plans developed for North-Eastern States in various States.
- ii) Post-harvest Infrastructure: GIS and remote sensing were used to assess the need and find the optimum locations for infrastructures such as cold chains, markets, etc.
- iii) Crop Intensification: In areas where cropping intensity was low and regions of unutilized/under-utilized, short duration horticultural crops could be incorporated into the crop rotation. This was also linked with watershed and wasteland development programmes of the Government of India.
- iv) GIS database creation: The GIS database included the inputs required for managing the horticultural crops such as soils, weather, infrastructure (e.g. markets). This helped in better income generation for the farmers, especially in tribal and remote areas.
- v) Orchard Rejuvenation: This aids in identifying the plantations/ orchards that needed rejuvenation and assess the shifting of orchard areas especially of Apples in Himachal Pradesh, Mango (Malda), Orange (Darjeeling) and Citrus in Arunachal Pradesh.
- vi) Aqua-horticulture: Wetland in Andhra Pradesh was created at 1:50000 scale using satellite data. Various horticultural crops (e.g. Makhana/Fox nut) are grown in wetlands. A GIS database was created for selected sites to understand the ecology and economics of these crops so that these could be replicated.
